# Problem - Errors

## Resize Posted Images Mod does not resize any images:
Similar to the PNG fix described above, this mod needs `Active Scripting` enabled as well otherwise you will see an error in the Internet Explorer status bar and the images will not get resized.

## Problem:
While browsing the forums you see an error in Internet Explorer's status bar and images will not get resized in the forums:

Done, but with errors on page.

The error message is the following:

Line: 126
Char: 2
Error: Expected ')'
Code: 0
URL: *Here you will see which page you are currently browsing so this does not say much usually*

## Solution:
1. In Microsoft Internet Explorer 5.x or later, click on `Internet Options` from the `Tools` menu.
2. From the `Security` tab, click `Custom Level`
3. Now click on `Custom Level...` while the `Internet` icon is highlighted above (highlighted per default)
4. Scroll down to the section `Scripting` and enable `Active scripting`. We also recommend that you set `Java permissions` to `High safety`
5. Now apply the changes by clicking `OK` (2 times)
6. Close all browser windows and relaunch the browser and the settings should be enabled
